

model HCR8

Remote Drinking Fountain Water chiller

FEATURES & BENEFITS

CONSTRUCTION

Constructed of heavy gauge galvanized steel, its compact style can be concealed under a counter, and between or within walls.

CHILLED WATER

Efficient compact design provides 8 gallons (30.3 L) per hour of 50° F (10° C) cold water to a wide variety of fountains.

OPTIONS

- Shelf: Model H7149MS, mounting shelf for remote chillers.

For more information, visit www.hawesco.com or call (888) 640-4297.

SPECIFICATIONS

Model HCR8 remote chiller is a hermetically sealed R-134a refrigeration system and is capable of supplying water to a maximum of 2 bubbler stations and is designed to provide 8 gph (30.3 L) of water at 50° F (10° C) +/- 5° cooled from 80° F (26.7° C) inlet water at 90° F (32.2° C) ambient. The unit is rated at 115V, 60Hz, and 5 amps.

APPLICATIONS

This remote chiller can provide 8 gallons per hour of 50° F +/- 5° cold water to a wide variety of fountains. Specifically, this type chiller may be used in conjunction with a fountain in settings such as: schools, office buildings, shopping malls, and other indoor environments where there is a demand for a chilled water source. Electric water coolers are not recommended or designed for outdoor applications or enclosed pool areas (chlorine). These conditions may void warranty. Haws electric water chiller is certified to NSF/ANSI Standard 61, Section 9, comply with ARI Standard 1010, and is listed by Underwriter Laboratories to U.S. and Canadian standards.

Installation Instructions

HCR8 Refrigeration Packages

NOTICE: This water cooler must be connected to the water supply using a dielectric coupling.

IMPORTANT! INSTALLER PLEASE NOTE.

The grounding of electrical equipment such as telephone, computers, etc., to water lines is a common procedure. This grounding may be in the building, or may occur away from the building. This grounding can cause electrical feedback into a water chiller, creating an electrolysis which causes a metallic taste or an increase in the metal content of the water. This condition is avoidable by using the proper materials indicated below.

LEGEND

A = 1/4" O.D. TUBE WATER OUTLET C = TEMPERATURE ADJUSTMENT
B = 1/4" O.D. TUBE WATER INLET D = ELECTRICAL

INSTALLATION

1. When mounting unit in an open area, to insure proper ventilation, maintain a 4" (102mm) clearance from cabinet louvers on each side of cooler. When mounting unit in a cavity or behind a wall maintain minimum space of 4" (102mm) on each side, 4" (102mm) on the top and a depth of 12" (305mm).
2. Water inlet is 1/4" (6 mm) O.D. tube. Contractor to supply the connections as required.
3. Connecting lines to be of unplated copper, thoroughly flushed to remove all foreign matter before being connected to cooler. If flushing does not remove all particles, a water strainer should be installed in supply line. This cooler is manufactured in such a manner that it does not in any way cause taste, odor, color or sediment problems.
4. Connect cooler to building supply line with a shut-off valve and install the in-line strainer between the valve and cooler.
5. Electrical: Make sure power supply is identical in voltage, cycle, and phase to that specified on cooler serial plate. Never wire compressor directly to the power supply.
6. This chiller has been designed for use with potable water **ONLY**.

START-UP

1. Open supply line valve.
2. Purge air from all water lines by operating bubbler valve of fountain to which cooler is connected. Steady stream assures all air is removed.
3. Rotate fan to insure proper clearance and free fan action.
4. Connect to electrical power.

TROUBLE SHOOTING & MAINTENANCE

Temperature Control: Factory set at 50°F (± 5°) under normal conditions. For colder water, adjust screw on item no. 9 in clockwise direction.

Ventilation: Cabinet louvers and condenser fins should be periodically cleaned with brush, air hose or vacuum cleaner. Excess dirt or poor ventilation can cause no cold water and compressor cycling on the compressor overload protector.

Lubrication: Motors are lifetime lubricated.

Actuation of Quick Connect Water Fittings: Cooler is provided with lead-free connectors which utilize an o-ring seal. To remove tubing from the fittings, relieve water pressure, push in on gray collar while pulling on the tubing. To insert tubing, push tube straight into fitting until it reaches a positive stop, approximately 3/4".

OPERATION OF QUICK CONNECT FITTINGS

PUSHING TUBE IN BEFORE PULLING IT OUT HELPS TO RELEASE TUBE
