**DIRECTIONS FOR USE:** Undercut the concrete or masonry surrounding the hole or crack to be repaired to a minimum depth and width of 3/4". Remove all loose particles, dirt and other foreign materials from the area to be patched. Pre-wet the substrate with potable water prior to installing the material.

Mix *Speccrete® Speccoplug* in a clean container using approximately five parts powder to one part water by weight (each 5# of powder will require approximately 1 pint of water). Hot water will accelerate the set time. Mix thoroughly for 5 seconds and then apply within 20 seconds. Hold material in place by hand for one minute. Mix only small amounts that can be used within one minute.

**CAUTIONS:** Do not re-temper mix. Adding additional water over what is recommended will delay set times and reduce overall strength gain. Do not apply to frozen or frost filled surfaces. If slower set material is desired, use *Speccrete® W-10 Waterstopper Cement*.
