Open space rough-in design permits new installation or replacement of existing fountains and coolers with this Elkay cooler when rough-in is within the outline shown.

**IMPORTANT! INSTALLER PLEASE NOTE:**

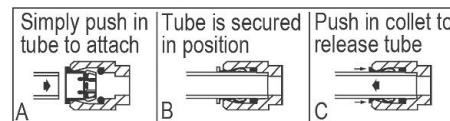

This water cooler has been designed and built to provide water to the user which has not been altered by materials in the cooler waterways.

The grounding of electrical equipment such as telephone, computers, etc to water lines is a common procedure. This grounding may be in the building or occur away from the building. This grounding can cause electrical feedback into a water cooler creating an electrolysis which creates a metallic taste or causes an increase in the metal content of the water. This condition is avoidable by installing the cooler using the proper materials as shown below.

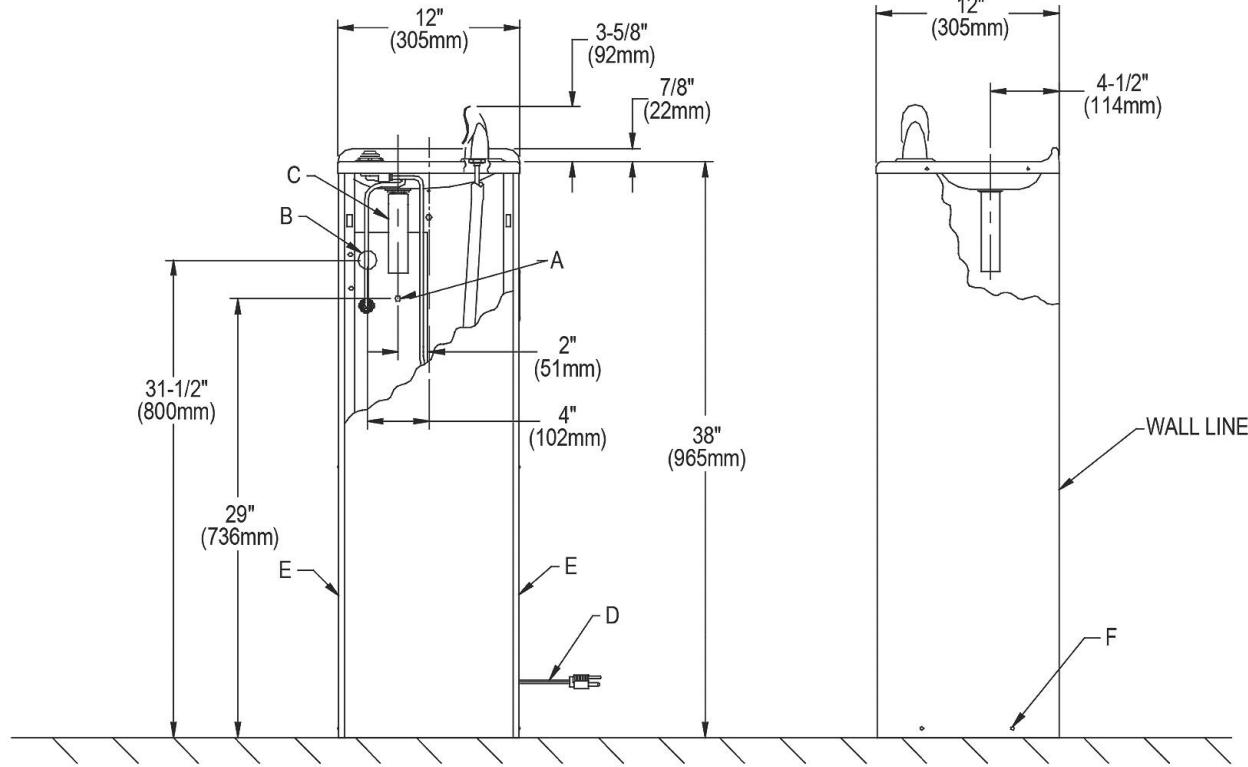

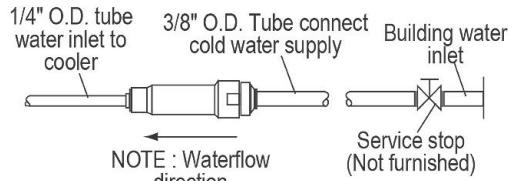

**NOTICE**

The water cooler must be connected to the water supply using a dielectric coupling. The cooler is furnished with a non-metallic strainer which meets this requirement. The drain trap which is provided by the installer should also be plastic to completely isolate the cooler from the building plumbing system.

**OPERATION OF QUICK CONNECT FITTINGS**

Pushing tube in before pulling it out helps to release tube

**LEGEND**

A = Recommended water supply location. Shut off valve (not furnished) to accept 3/8" O.D. unplated copper tube connect.

B = Recommended location for waste outlet 1-1/4" O.D. drain.

C = 1-1/4" Trap (not furnished).

D = Power cord 4 feet (1219mm) long.

E = Insure proper ventilation by maintaining 4" (102mm) (MIN.) clearance from cabinet louvers to wall.

F = To level unit, loosen screws to adjust base for contact with floor. Tighten screws after unit has been leveled.

NOTE: New installations must use Ground Fault Circuit Interrupter (GFCI).
